## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent Application 2003/0030767 ("767").

Per claim 1, 3, 767 teaches a liquid crystal display device including a reflection portion [region corresponding to R] and a transmission portion in one pixel [region corresponding to Ra], wherein an orientation mode of the liquid crystal is a twist orientation [50 to 70 degree twist], a polarization plate [P1] and one phase difference plate are provided on a viewing surface side [D1], and a polarization plate is provided on a back surface side [P2]. 767 lacks a normally black mode polarizer configuration. However, it was well known to use normally black polarizer configuration to improve contrast. Accordingly it would have been obvious to one of ordinary skill at the time of invention to make a normally black cell of 767.

Per claim 2, 4. A liquid crystal display as set forth in claim 1, wherein a ratio  $dt/dr$  between a gap  $dt$  of said transmission portion and a gap  $dr$  of said reflection portion satisfies a relationship of  $dt/dr$  from 1.7 to 2.05 [see paragraph 0084].

Claims 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over 767 as applied to claims 1-4 above, and further in view of US Patent Application 2004/0183969 (“969”).

767 lacks at least one side in the shape of the boundary between said transmission portion and reflection portion is a shape other than a straight line. However, 969 teaches both straight and curved lines as a matter of design choice. Accordingly it would have been obvious to one of ordinary skill at the time of invention to combine the curved lines of 969 with 767.

***Allowable Subject Matter***

Claims 5-10 and 14-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
